

BECAUSE FARMERS DESERVE THE BEST

FOOT AND MOUTH DISEASE (FMD)

Protecting Livestock with Proven Disinfection

Foot and Mouth Disease (FMD) is a **severe, highly contagious viral disease** that affects **cloven-hoofed animals**, including cattle, pigs, sheep, goats, deer, and many wild species. The disease is caused by the *Foot-and-Mouth Disease Virus (FMDV)*, which belongs to the *Picornaviridae* family and has **seven distinct serotypes** (O, A, C, SAT1, SAT2, SAT3, and Asia1), each with multiple subtypes. There is no universal vaccine due to this high variability.

Key Symptoms:

- High fever followed by the appearance of **blisters (vesicles)** on the mouth, tongue, lips, snout, teats, and between the hooves.
- **Excessive salivation**, mouth lesions, and **lameness** due to foot sores.
- Decreased milk production in dairy animals.
- In young animals, the virus can cause **sudden death due to heart damage**.

SANI-99™ for AGRI is a scientifically developed, high-performance disinfectant formulated specifically for the demands of the agricultural and veterinary sectors. It has been independently tested and verified by DEFRA (UK Government Animal and Plant Health Agency) to achieve a Log 5 reduction (99.999%) against Foot and Mouth Disease (FMDV).

How FMD Spreads:

FMD spreads rapidly through **direct contact** with infected animals and **indirect transmission** via contaminated feed, water, equipment, clothing, vehicles, and airborne particles (especially in cool, humid conditions).

The virus can persist in the environment and in carrier animals, making it extremely difficult to control without **strict biosecurity and disinfection protocols**.

Economic and Agricultural Impact:

- Causes **massive production losses** in the livestock industry due to decreased growth, reduced fertility, milk loss, and culling.
- **Trade restrictions** and quarantines are imposed by international and national authorities during outbreaks.
- Outbreaks require **emergency vaccination, movement control, and depopulation**, leading to significant financial burden on farmers and governments.

Zoonotic Risk:

FMD is **not considered a public health threat**, as it rarely affects humans. However, it poses a major threat to **animal health, food security, and global trade**.

SANI-99™ for AGRI is a scientifically developed, high-performance disinfectant designed for the rigorous needs of the agricultural and veterinary sectors. Effective across farms, transport systems, and clinics, it provides **broad-spectrum protection** against pathogens, including the **Foot and Mouth Disease Virus (FMDV)**. **Independently verified by DEFRA**, SANI-99™ achieved a **full 5 Log (99.999%) reduction** in FMDV within 30 minutes. It meets **ISO/IEC 17025:2017** and **BS 6734:1986** standards and is **approved for use in official disease control measures** across the UK. It is **suitable for outbreaks** of FMD, African Swine Fever, and other **notifiable diseases**.

Offering **proven bactericidal, virucidal, and fungicidal action**, SANI-99™ eliminates threats like *E. coli*, *Salmonella*, SARS-CoV-2, and *Candida*. **Safe for routine use** around animals and humans when diluted, it can be applied via **spray, fog, mop, or soak**. Once mixed, it remains **effective for up to three months**. SANI-99™ is

is also **eco-friendly—fully biodegradable, non-bioaccumulative, and breaks down into harmless byproducts**, making it safe for use near sensitive environments.

Ideal For:

- Farms & Feedlots
- Veterinary Clinics
- Transport Vehicles & Trailers
- Food & Feed Handling Areas

Directions for Use

Dilution: Mix 96g of powder per 16L of clean water. Stir well. Stable for up to 6 months if stored sealed in a cool, dry place.

Application: Apply via spray, mop, fogger, or soaking. Suitable for surfaces, equipment, vehicles, and footwear.

Contact Time: Maintain 30 minutes of visible wetness for effective FMDV control.

Usage Tips:

- Prepare fresh solution daily in high-risk areas.
- Use PPE when handling concentrate.
- Ventilate during fogging.
- Do not mix with other products.

Methods of Application

- ✓ **Spraying:** Use handheld or backpack sprayers on surfaces, equipment, and animal areas.
- ✓ **Mopping/Wiping:** Disinfect floors, pens, and work areas using soaked cloths or mops.
- ✓ **Fogging:** Use thermal or cold foggers for large spaces like barns, transport units, or vet clinics.
- ✓ **Soaking:** Submerge tools, footwear, or gear in solution for full disinfection.
- ✓ **Vehicle Disinfection:** Spray tires, undercarriages, and ramps of incoming/outgoing vehicles.
