SANI-AMANZI **Technical Application & Operational Guidelines**

1. Product Overview

SANI-AMANZI is a powder-based water treatment solution designed for the purification of contaminated water in rural, bulk, and off-grid environments. The product facilitates coagulation, flocculation, and sedimentation when applied according to protocol.

2. Technical Performance Principles

- Coagulation & Flocculation: Particles bind to form flocs
- Sedimentation: Heavier particles settle at the bottom
- Separation: Clear water remains at the top
- Filtration: Final removal using cloth or filter

Note: Performance depends on correct agitation, settling time and filtration.

3. Dosage & Scalability

Water Volume	Dosage
20 Liters	6 grams
1,000 Liters	300 grams
5,000 Liters	1.5 kg

Dosage remains consistent across all volumes.

4. Standard Treatment Protocol

1. Collect water into container (min 20L)
2. Add correct dosage
3. Stir thoroughly (critical)
4. Allow to stand for minimum 30 minutes
5. Extract water from top layer
6. Filter through dense cloth

5. Application Limitations

Boreholes: Do not apply directly.

JoJo Tanks: Mixing is difficult, sludge builds up, cleaning required, monitoring needed.

Recommendation: Treat water in containers before storage.

6. Operational Requirements

- Mixing capability
- Filtration materials
- Controlled settling environment
- Basic operator training

7. Health & Safety

- Follow guidelines strictly
- Only consume filtered top-layer water
- Dispose of sludge properly
- Clean containers regularly

8. Deployment Suitability

- Rural communities
- Borehole systems
- Agriculture
- Emergency/disaster relief
- Bulk water treatment

9. Key Success Factors

- Correct dosage
- Proper mixing
- Full settling time
- Effective filtration
- Protocol adherence

SANI-AMANZI provides a structured, scalable solution for water purification in environments where reliability and simplicity are critical.

Successful implementation depends on adherence to the prescribed treatment protocol and operational guidelines outlined in this document.
