Agricultural Biosecurity & Clean Water Solutions

SANI-99 for AGRI and SANI AMANZI

Presented by Ubuntu Life Resources

Strategic Agents for SSS – Scientific Sanitation Solutions

Tonno Bonno Internation (High Protein Canned Seafood)

Solutions for:

- Agricultural biosecurity
- Livestock disease prevention
- Safe drinking water access
- Community health protection

Introduction

Ubuntu Life Resources works with Scientific Sanitation Solutions (SSS) to introduce sanitation and water purification technologies designed to address agricultural biosecurity challenges and safe drinking water access.

Why These Solutions Matter

Agricultural disease outbreaks and unsafe water sources create major economic and health challenges worldwide.

- Improved agricultural biosecurity and livestock health
- Reduced disease transmission in poultry and livestock farms
- Protection of food production and supply chains
- Access to safer drinking water in rural communities
- Scalable sanitation technologies for agriculture and humanitarian use

SANI-99 AGRI and SANI AMANZI demonstrate how sanitation technologies can support healthier farms and safer communities.

SANI-99 AGRI

SANI-99 AGRI supports modern agricultural biosecurity by eliminating harmful pathogens that threaten livestock health and agricultural productivity.

Product Range

SANI-99 AGRI

The Agricultural Biosecurity Challenge

Modern agriculture faces increasing disease threats that impact productivity and profitability.

Key risks include:

- Avian Influenza
- Newcastle Disease
- Salmonella outbreaks
- E.coli contamination
- Foot and Mouth Disease

These pathogens spread through contaminated equipment, livestock environments and farm vehicles.

Strong biosecurity is essential for protecting livestock and food production.

The Solution

SANI-99 AGRI is a veterinary-grade disinfectant designed for agricultural biosecurity.

Key capabilities:

- Log-7 pathogen elimination
- Effective against bacteria, viruses and fungi
- Residual protection up to 90 days
- Alcohol-free and chlorine-free
- Safe for livestock environments

Product Packaging (Bulk Container)

Bulk agricultural disinfectant containers used for large farming operations including poultry farms, cattle farms, pig farms, dairy facilities and food production environments.

Concentrated Sachet Format

SANI-99 AGRI is also supplied as concentrated sachets.

Advantages:

- Easy transport
- Precise dosing
- Rapid mixing

Typical use:

1 sachet mixed into 16-litre sprayer tanks for foggers, sprayers, foot baths and sanitation tanks.

Agricultural Applications

Used across the agricultural ecosystem including:

- Poultry farming
- Pig farming
- Sheep farming
- Cattle farming
- Egg production
- Abattoirs
- Dairy production
- Cold storage facilities

Before and After Biosecurity

Before sanitation:

- Contaminated surfaces
- Pathogen growth
- Disease spread

After applying SANI-99:

- Disinfected farm environments
- Improved livestock health
- Reduced infection risks

Certifications and Compliance

SANI-99 AGRI meets strict international standards including:

- DEFRA Approved
- BEIC Certified
- PCS Certification

Standards include:

- BS EN 1276
- BS EN 14476
- BS EN 13727
- SANS agricultural standards

Cost Efficiency

SANI-99 AGRI is highly concentrated.

Example:

6kg of SANI-99 produces up to 1000 liters of disinfectant solution.

Benefits:

- Lower operational costs
- Fewer repeat applications
- Scalable for large farms

Before Sanitation – Biosecurity Risk

Without proper sanitation, livestock environments become breeding grounds for pathogens that increase disease risk.

After Sanitation – Improved Farm Hygiene

Proper sanitation protocols significantly improve farm hygiene and reduce disease transmission.

Case Study – Transforming Poultry Production

<https://www.scisan.co.za/transforming-poultry-production/>

	Flammable. Extremely dangerous in most cases. Mostly uncontrolled dosage and unregulated percentage content.		Non-flammable in solution. Water-based product. Controlled dosage and regulated percentage content.
	Most commonly used disinfectants on the market can only achieve a minimal Log rating of around 3 (99.9%). There is no "one solution fits all" and therefore multiple bio-security preventative processes are required.		SANI-99™ for AGRI is multi-purpose with an unbeatable Log 7 rating (99.99995%) and can be used as a complete bio-security preventative disinfectant.
	Many commonly used disinfectants fail to meet standard disinfection requirements and often become banned due to their harsh chemical nature.		SANI-99™ for AGRI has passed the EN 14476:2013 +A2:2019, EN13697, EN 1276 disinfectant efficacy standards and has been approved safe for use by DEFRA.
	Current market disinfectants have poor efficacy lead times with many having a lasting effect as little as a few hours. Therefore, repeat applications are required often making it an unaffordable solution.		SANI-99™ for AGRI has a class leading efficacy of over 3 months requiring fewer repeat applications and therefore much more cost effective.
	Alcohol based disinfectants have restrictive uses i.e. cannot be used by some religions.		SANI-99™ for AGRI is Halal certified and approved for use within Halal facilities.
	Most commonly used disinfectants on the market contain harsh chemicals and are hazardous to human and animal health. Full PPE is required during application.		SANI-99™ for AGRI is non-toxic, and safe around humans and animals; therefore, no formal PPE is required during application.
	Most disinfectants on the market are only available as a pre-mixed solution as they can be unstable in their raw form. This creates a lot of plastic waste and logistically more difficult to transport, thus becoming very expensive.		SANI-99™ for AGRI has no plastic waste and is efficient to transport in its powder form. It's truly an affordable disinfectant for all.

SANI AMANZI – Water Sanitizing Solution

SANI AMANZI provides a portable sanitation solution for improving water quality in regions where access to safe drinking water is limited.

Global Water Crisis

Access to safe drinking water remains a major global challenge.

- 2.2 billion people lack safe drinking water
- 1.5 million deaths annually from waterborne disease

Communities around the world rely on contaminated water sources.

The Solution

SANI AMANZI is a point-of-use water purification solution designed to provide safe drinking water quickly and efficiently.

Key benefits:

- Portable
- Easy to use
- Rapid purification
- Scalable for communities

Product Format

Each 6g sachet purifies up to 20 liters of contaminated water.

This allows rapid purification for:

- Households
- Rural communities
- Disaster response situations

Pathogen Elimination

SANI AMANZI eliminates harmful pathogens including:

- E.coli
- Salmonella
- Shigella
- Cholera bacteria
- Viruses and protozoa

Delivers up to 99.99% pathogen removal.

Water Transformation

Before treatment:

- Contaminated water
- Bacteria present
- Unsafe for drinking

After treatment:

- Purified water
- Improved clarity
- Safe for human consumption

Contaminant Reduction

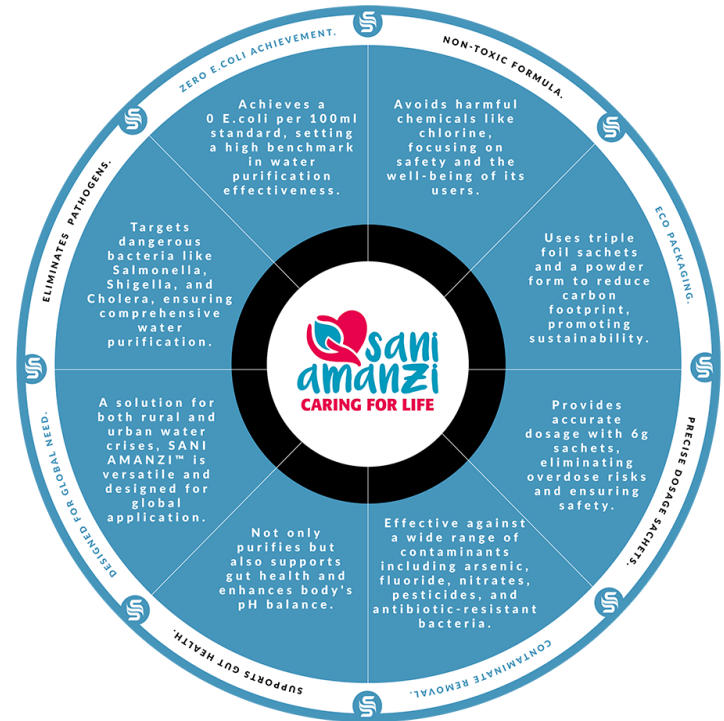

Help reduce contaminants including:

- Arsenic
- Fluorides
- Nitrates
- Pesticides
- Iron

Scientific Testing

Independent testing confirms:

- Elimination of E.coli
- Removal of coliform bacteria
- Improved water classification

Water treated with SANI AMANZI meets recognized drinking water standards.

Applications

Used in:

- Rural communities
- Humanitarian relief operations
- Disaster response
- Mining camps

• Remote locations Case Study – Mozambique Water Initiative

<https://www.scisan.co.za/mozambique-case-study/>

	They are a health risk - Frequent use can lead to long term adverse side effects to health.		Safe for consumption - No chlorine or harmful chemicals are used to sanitise the water.
	Despite their harsh nature of chemicals used, the disabled microorganisms and other contaminants remain in the water.		Disabled microorganisms and other contaminants are successfully removed from water.
	Treated water still smells and looks the same as it did before purification. Turbid water stays turbid.		Treated water is much improved with enhanced clarity and removal of bad odours.
	They don't remove odours or tastes from the water. They may even contribute to a bad taste of the water.		Eliminates bad odours and tastes from the water resulting in fresh tasting water.
	They generally do not have any drinking water approvals. There are no published tests that indicate the quality of drinking water after using these tablets.		It has passed the SANS 241-1:2015 (South African National Standard) drinking water standard limits.
	Environmental requirements are becoming increasingly strict. It is anticipated that they will eventually disappear from the market.		Universally safe for all (planet, human, animal & marine friendly), and logistically convenient to transport - minimising our carbon footprint.
	They can be expensive, particularly if you need to purify large quantities of water.		An affordable and practical to everyone who is exposed to contaminated water.

About Tonno Bonno International

WHY TONNO BONNO?

- ✓ High-Quality Premium Seafood
- ✓ Globally Trusted Brand
- ✓ Tons of Flavour & Value
- ✓ Extensive Product Selection

About Tonno Bonno

TONNO BONNO is a seafood brand focused on delivering high-quality canned tuna, sardines, and pilchards to African markets.

Our mission is to supply affordable, nutritious seafood products with strong brand recognition and reliable supply.

About Tonno Bonno

Core Products:

Pilchards in Tomato Sauce

Sardines in Vegetable Oil

Sardines in Tomato Sauce

Tuna Chunks in Oil

Tuna Chunks in Brine

Why Tonno Bonno?

High demand protein product

Strong shelf visibility

Competitive pricing

Long shelf life

Fast moving consumer good (FMCG)
